

**Multi-platform
genome assembly of an
SHR/OlaIpcv X BN-Lx/Cub F1
rat “trio”**

- Quality control
- Adaptive sequencing
- **ONT reads correction**

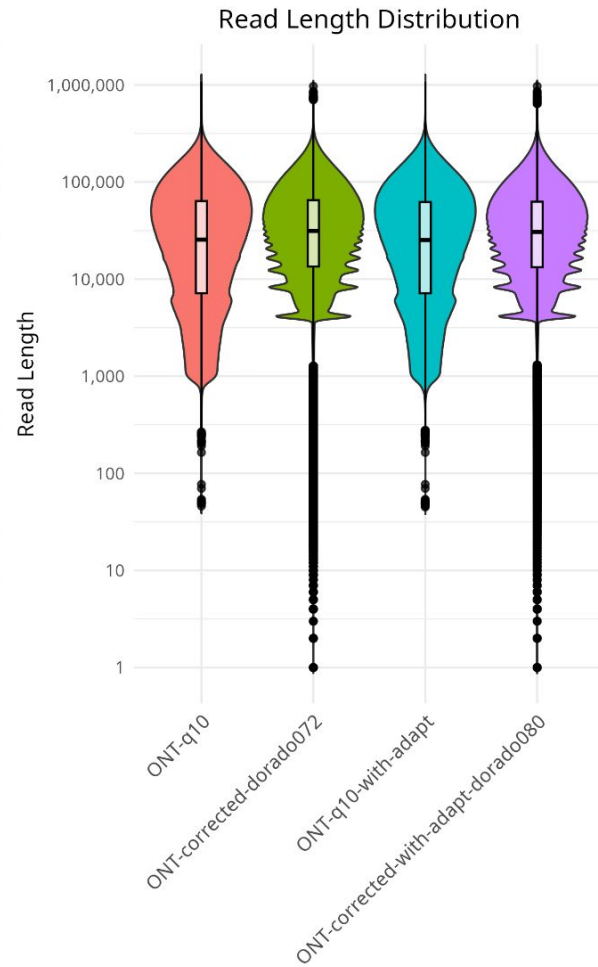

Is HERRO-correction working?

HERRO-correction is working

HERRO-correction statistics

Conclusions

- ONT reads improve assembly contiguity while paying for correctness
- ONT-only assemblies have more contigs and more errors
- HERRO-correction works, but it is still not enough (and is very slow)

Hi-C data is coming!

Thanks!
